**Abstract:**

Brodifacoum (0.45 ppm) was detected in the liver sample of a red fox from Sacramento County, CA during 2011. The liver sample was collected from the red fox as part of a long term genetics and population study. The cause of death for the red fox was not reported (D1105211-01 N-027-11/S10-0568).

With the present submission it would be important to have postmortem evidence of a coagulopathy for a diagnosis of anticoagulant rodenticide intoxication. In the absence of a coagulopathy, the detected concentration is consistent with exposure (not intoxication).
